The puzzles will be printed and the solutions are all available to you. The puzzles are constructed from crossword search results taken from various newspapers. The search results are fed into the application and the puzzle constructed. You can then print it out and solve it (or keep it around to answer on your own). The puzzle data is stored in the database, in XML format. Crossdown can be run both as a single stand-alone application or as an XBL plugin. The .xsd and .xsi files are used for constructing the puzzles. The files contain all the information to print out the puzzle and the solutions. The .xsd file is used to define the search criteria. The .xsi file is used to generate the actual crossword search results. The .xsd files can also be used to save puzzles, and can be used to save puzzles to databases, spreadsheets and presentations. The .xsi files, on the other hand, contain the actual crossword search results. The Crossdown database can be automatically updated on a schedule. The Crossdown database stores the following information: - Grid information, including grid number, published date, publication time, the puzzle type, and the copyright information. - Crossword search information. - Editor grid information. When run as a stand-alone application, the

---

database is automatically created and populated with the puzzles and solutions. When run as an XBL plugin, the database is first saved to a file and then uploaded to the publisher's server. The application works in the following ways: - The crossword search results are uploaded to the database, and the crossword grids (with crossword search information) are created, based on the crossword search criteria. The grids are filled with the puzzles, along with crossword solution data. The editor grid is then added. - When the user wants to print out the puzzle and solutions, the crossword search results are downloaded from the database. These are then passed to the crossword generator and the puzzle is printed out. - The puzzle is then printed out and the user is asked to select the option to print the crossword solution as well. - The crossword solution is downloaded from the database and saved in the user's file system, where it can be opened in an editor 82157476af
